

T.andreana is an air plant that is native to Colombia. They grow on cliffs and rocks in the wild.

- **Water:** Lightly mist your T.andreana at least 3 time per week (morning hours). You can mist every other day, depending on air moisture levels.
Once per week, briefly shower.
After shower, gently shake off the excess water and let plant completely dry (upside down) in an area with good air circulation to prevent rot.
- **Fertilize:** Add bromeliad or tillandsia fertilizer only to filtered water or tap water used to water air plant. No need to add to rain water...nutrients are already present.
- **Light:** T.andreana grows best in bright indirect light. Artificial grow light is a good alternative. Avoid direct, intense sunlight. The heat significantly deplete moisture and dry out the air plant.

Tips: Filtered or rain water is best for T.andreana. Tap water is okay depending on the condition of your local water source. Avoid distilled water. T.andreana require at least 50% air humidity with proper air circulation. Temperature range should be 50° F – 80° F.
