General Cactus Care

Cactus plants are very easy to grow. With proper care, cacti can live and grow for many years.

- **Water:** Water soil directly and deeply. Allow at least 1 to 2 months between waterings (can go longer). Do not mist. Overwatering will cause root rot.
- **Fertilizer:** Optional, but can use Osmocote Fertilizer once during Spring/Summer
- **Light:** Bright sunny window or can use a broad spectrum grow light if natural light indoors isn't available.
- **Soil:** Well-draining gritty soil for cactus and succulents. Avoid peat mix potting soil.
